# Homelessness, Pandemics, Climate Events ... UniFold™ Shelter Systems are Mobile, Durable, Reusable – and Up to Any Task. Let Us Help!

**Why UniFold™?** Number one, it's the fastest and easiest deployment in the industry. Only UniFold™ shelters are ready for use in just seconds, with all interior accessories in place, including a rigid floor and walls, anchoring with weight on the floor.

**Never purchase another tent.** Only UniFold™ products can be reused hundreds of times because they are one piece, with no free parts to lose or break. The twin wall construction and integrated floor make them suited to resisting extreme wind and rain, while easily accepting air conditioning or heating. Deploy them on grass, asphalt or concrete, with no wasted space between them because they don't need any ropes or pegs; they are simply anchoring with weight on the rigid floor.

## **ADOPT, ADAPT AND IMPROVE: HOW WE COVER ALL BASES**

We adapt our exoskeleton structures to include plumbing for showers, lighting for encampments, HEPA filtered or UV Sterilized air for hygienic and safe field laboratories. With the resulting negative pressure, UniFold™ tents make ideal bio-secure patient isolation wards.

## **Responding to a Global Demand: Some of UniFold's Customers**

Ontario Ministry of Health  
St. John's Ambulance  
Utah Dept of Health  
All of New York State  
Hazmat Teams  
Paris, France Fire Dept.  
Canadian Armed Forces

Texas Health Resources  
Scripps Hospital System  
St. John's Medical Center  
Hamilton Health Sciences  
Calcutta Commercial  
Corporation, India\*

## HOSPITAL SURGE ICU

Deploy in seconds indoors or out. Our single-piece construction practically eliminates training time. Rigid walls support without the need for ropes or pegs, etc. Concertina folded walls and roof resist positive and negative pressure without deforming. The twin wall construction is insulated for HVAC. Options include porting for air handling and reusable storage bag for handling hundreds of times between uses.

## MASS DECONTAMINATION SHOWER SYSTEMS

Tent incorporates three separate lanes: one each for male female ambulatory, and one for non-ambulatory patients. Size: 11'X18'X7'; Weight: 162 lbs.

## HOSPITAL SURGE PATIENT ISOLATION WARDS

Individual Shelters occupy from 1 to 8 beds depending on size. Ideal for interior use when a patient's isolation is required. Complex with hallways in outdoor settings. Typical size is 11'X30'X7' for 8 beds.

## STERILIZATION SYSTEMS

Sterilize everything from samples as they are submitted for testing, to your front line responders in full PPE gear. We work with the best manufacturers and scientists of sterilizing technologies to integrate them into deployable systems that do the specific job needed. From table top cabinets to walk through tunnels, we'll make what you need.

## SUPPLEMENTARY PPE

Positive pressure can be fresh air, HEPA filtered air, UV Sterilized air, or a combination of these methods for the ultimate protection of Emergency Responders, Nurses and Hospital Staff. Typical size is 11'X10'X7' for a team of two or three.

## CHANGE ROOM/FIELD SUPPLIES

Ensure modesty for First Responders as they change in and out of clothing and PPE. Secure materials, like PPE, test kits, samples and supplies are protected from the elements and those who would take advantage of their availability. Typical size: 11'X22'X7' for a field dispensary with one attendant.

## DECONTAMINATION SHOWERS

The two-stage, four compartment system deploys in seconds with no assembly. Enter shelter, change out of contaminated clothing in the first compartment then step into the shower; then into the rinse compartment, and then into the change compartment

where clean dry hospital garb is then dispensed from a chute. Size: 10'X18'X6'6".

## DISASTER RESPONSE CAMPS

Provides clean, dry, well-lit sanctuaries for cooled space with typical room air conditioners. Twin wall insulated panels afford energy efficiency that allows 110 VAC to do the job. Typical size is 11'X22'X7'. Shelters can then easily be moved and arranged for efficient layout by simply dragging or carrying them. Quick set-up, comfortable temporary quarters.

# Canada's Crisis: The Homelessness Epidemic. UniFold™ Products Can Give Communities Help While Providing Hope to the Unhoused.

At UniFold™ we have made it our mission to help those most in need. Our shelters are built for all weather conditions, all climates, all situations. Tent cities have failed miserably for both those unhoused and their communities. Our shelters are infinitely flexible and adaptable and can be set up within minutes. Installation of HVAC capacity, lighting systems and showers, they are an effective answer to issues of hygiene and comfort that restore dignity to those who have found themselves without housing.

## GOT A MINUTE? THAT'S ALL IT TAKES!

UniFold™ tents can be erected quickly, anywhere. A roof over your head and a floor under your feet in only minutes!

## Securely Packaged and Efficiently Shipped, UniFold™ Goes Anywhere Needed ...

We ship tents worldwide in full and partial container loads; having supplied customers in Taiwan, India, France, Democratic Republic of The Congo, Panama, and Italy. Quantity discounts are available for large orders.

- Designed for emergency, disaster, medical, fire, police, ambulance and military use
- Deploys in seconds on any surface with minimal assembly and no need for ropes or stakes
- Twin wall polypropylene paneled including rigid floor; weather resistant and insulated
- Exoskeleton structures are food grade, autoclavable, hygienic
- Easily heated and air-conditioned
- Reusable hundreds of times. Easily sterilized with UVC light.
